

## 5 reasons to choose emailcloud

### 1. Technology

Spam moves fast, and is now over 97.5% of your inbound mail. emailcloud's multiple filtering methods provide the most advanced filtration on the market, and comprehensive control settings to ensure that all legitimate email reaches your inbox

### 2. Simple Pricing Structure

emailcloud solves email threats and spam problems as a whole of business service, setting user limits high to enable business growth without requiring complicated administration or additional billing

### 3. Quarantine Control

emailcloud offers an unprecedented 6 months quarantine list to every user as standard. Users can access, control and release quarantined emails themselves.

### 4. Cloud Computing/Scalability

Cloud computing power from around the globe gives emailcloud near infinite server capacity to filter any surge in email traffic without delay or compromise to service standards.

### 5. Hassle Free

emailcloud is a hosted service, using all of its expertise and effort to protect your inbox from malware. There are no updates to install, no software or hardware needed.

## Frequently Asked Questions

### Q.What operating system is required?

A.emailcloud is available for every operating system on the market. It is hassle free to operate, and instantly delivers filtered mail to your inbox.

### Q.Why multiple scanners?

A.emailcloud uses multiple levels of filtering to constantly perform different tests. These tests together not only catch more spam, but also move dynamically with the fast changes to spamming techniques.

### Q.How easy is it to install?

A.It has never been easier. No software, no hardware, we simply change your mx records to route your email traffic through our servers and the job is done in minutes.

### Q.What does emailcloud filter?

A.emailcloud protects your inbox from spam, phishing, viruses, email threats by eliminating malware before it reaches your network.

### Q.Why is emailcloud better than internet level competitors?

A.By using cloud computing, emailcloud can scan, filter and store huge amounts of email simultaneously, taking instant action against all new forms of spam with no delay to the secure delivery of your email.

### Q.How scalable is emailcloud?

A.Infinitely. Because emailcloud uses cloud computing, it can cope instantly with any surge in mail traffic, from your company's own email activity or a worldwide outbreak in malware.

## Security

Unwanted messages and malware are targeting your inbox in increasingly sophisticated ways. emailcloud responds to each new threat with precision, allowing you to carefully manage your mail with complete confidence.

## Compliance

Organisations have a duty of care to protect employees/members from unpleasant material typically found in spam. Failure to do so may result in employees or clients receiving such mail from your organisation taking legal action.
